

# **RUSSIAN SNF HANDLING INDUSTRY**

**International Business Relations LLC**

**Moscow**

**April 2016**

### **About International Business Relations LLC (IBR™)**

IBR™ was established as consulting and engineering company working in the field of nuclear power and nuclear fuel cycle in Russia and the NIS. Working in close cooperation with domestic and foreign business partners the company provides a broad array of integrated services that enhance worldwide commercial developments. With vast experience of its staff, IBR™ is prepared to meet all requirements of customers.

Now IBR™ is an experienced, steadily operating and developing company. The IBR™ personnel possessing knowledge of both the nuclear technologies and project & financial management is in a position to solve the most complicated tasks in various fields of nuclear technologies and industry.

IBR™ is proud of its collaboration with the national and overseas partners including many worldwide known companies and organizations.

**International Business Relations, LLC (IBR™)**

## RUSSIAN SNF HANDLING INDUSTRY

### Contents

	List of figures	4
	List of tables	4
CHAPTER 1	MEW TECHNOLOGICAL PLATFORM FOR THE RUSSIAN NUCLEAR POWER DEVELOPMENT	5
CHAPTER 2	SC ROSATOM CONCEPT OF SNF HANDLING. SC ROSATOM PROGRAM FOR DEVELOPMENT OF SNF HANDLING PROCESSES AND INFRASTRUCTURE. MANAGEMENT SYSTEM FOR SNF HANDLING IN RUSSIA	7
2.1	General observations	7
2.2	SC Rosatom Concept of SNF handling	8
2.3	SC Rosatom Program of process development, providing and development of the infrastructure for SNF handling in the period of 2016-2030	9
2.4	Management system of SNF handling in Russia	11
CHAPTER 3	CHARACTERISTIC OF THE AVAILABLE AND TARGET INFRASTRUCTURE AND SNF HANDLING PROCESSES	13
3.1	Characteristic of the available / target infrastructure and SC Rosatom processes of SNF handling on the FSUE Mining and Chemical Combine site	13
3.2	Characteristic of the SC Rosatom existing and target infrastructure for SNF handling on the FSUE PA Mayak site	30
3.3	Characteristic of the SC Rosatom existing and target infrastructure for handling SNF on the JSC Siberian Chemical Combine site	34
3.4	Characteristic of the SC Rosatom existing and target infrastructure for SNF shipment	36

### List of figures

Figure 3.1	General view of major infrastructure for SNF handling on the FSUE Mining and Chemical Combine site as of the mid-2016
Figure 3.2	Lateral section of the SNF storage facility (SNFS-1) on the FSUE Mining and Chemical Combine site
Figure 3.3	Vertical plan of the wet SNF storage facility (SNFS-1) on the FSUE Mining and Chemical Combine site
Figure 3.4	“Wet” storage facility for SNF from the VVER-1000
Figure 3.5	12-item and 16-item casks with SFA arranged in the “wet” storage facility for SNF from the VVER-1000
Figure 3.6	SFA water irrigation system for the event of beyond design-basis accidents
Figure 3.7	Cross section of a storage chamber
Figure 3.8	A cell with containers for fuel element bundles from the RBMK-1000 reactor
Figure 3.9	A cell with containers for irradiated (spent) fuel assemblies from the VVER-1000 reactor
Figure 3.10	Storage hall of containers with SNF from the RBMK
Figure 3.11	“Dry” storage facility for SNF from the RBMK
Figure 3.12	Process flow diagram of SNF reprocessing at PDC
Figure 3.13	Comparison of generated RW volume: SNF reprocessing using PUREX technology vs. PDC technology
Figure 3.14	Process flow diagram of SNF reprocessing at the RT-1 Plant
Figure 3.15	Technology of SNF reprocessing for the module of irradiated mixed uranium-plutonium (nitride) fuel reprocessing
Figure 3.16	Rail transporters for SFA shipment
Figure 3.17	TUK-140 and TUK-141
Figure 3.18	Drawing of TUK-140
Figure 3.19	TUK-13B (TUK-13/1V)
Figure 3.20	TUK-137
Figure 3.21	TUK-141O
Figure 3.22	TUK-151
Figure 3.23	TUK-109 in the dry storage facility on the MCC site
Figure 3.24	TUK-109

### List of tables

Table 2.1	SC Rosatom Program on setting up and development of major infrastructure facilities to be involved in SNF handling
Table 3.1	Design capacity of the “wet” storage facility for SNF from the VVER-1000 on the Mining and Chemical Combine site
Table 3.2	Specifications of TUK-140 for SFA from VVER-440
Table 3.3	Major attributes of the old and new shipping-packaging casks for transportation of SFA from the VVER-1000/1200/TOI
Table 3.4	Attributes of TUK-109 and TUK-109T
